United Kingdom Occupancy Survey

Serviced Accommodation Summary Report
July 2020

On behalf of VisitEngland, VisitScotland, Visit Wales and NISRA (Northern Ireland Statistics and Research Agency)
UK Occupancy Survey

This study has been commissioned by the National Boards of England, Northern Ireland and Scotland and by Visit Wales (part of the Welsh Government) and supported by the Department for Digital, Culture, Media and Sport.

The results have been compiled by The Research Solution.

* See methodological note on slide 8

N.B. Due to the Covid-19 outbreak in the UK, the serviced accommodation industry saw an unprecedented number of establishments temporarily close their doors from late March 2020. On a sector-wise level these proportions will be an inflation of the occupancy levels in relation to previous years as many more serviced accommodation providers will have been closed owing to the extraordinary circumstances.

N.B. Due to the Covid-19 outbreak in the UK, the serviced accommodation industry saw an unprecedented number of establishments temporarily close their doors from late March 2020. On a sector-wise level these proportions will be an inflation of the occupancy levels in relation to previous years as many more serviced accommodation providers will have been closed owing to the extraordinary circumstances.
UK OCCUPANCY OVERVIEW

2821 hotels, guesthouses and bed and breakfast establishments throughout the UK supplied data upon which the figures in this summary of results are based (see notes 2 and 3, on Slide 8 – sample sizes and calculation of rates).

During July 2020, accommodation businesses started to reopen across the UK following on from the closure of many accommodation businesses in late March 2020 due to the COVID-19 Pandemic. Bedspace occupancy fell from 60% in 2019 to 20% in 2020, a decrease of 40 percentage points. Room occupancy followed a similar pattern, falling 56 percentage points, from 84% in July 2019 to 28% in 2020.
Summary of Findings

During July, accommodation businesses started to reopen across the UK following on from the temporary closure of businesses that had been in place since late March due to the COVID-19 Pandemic. When compared to the previous year, occupancy levels were still significantly lower in July 2020 with room occupancy down by 56 percentage points from 84% to 28% in July 2019. Bed occupancy recorded a fall of 40 percentage points from 60% to 20%, when compared to the same month the previous year.

Room occupancy in **England** during July mirrored that of the UK, with occupancy levels falling by 56 percentage points compared with the same period in 2019. Bed occupancy fell by 39 percentage points, down from 60% in 2019 to 21% in July this year.

**Northern Ireland** witnessed a significant decrease in both measures of occupancy when compared to July 2019. Room occupancy was down from 72% in 2019 to 19% this year, with bed occupancy falling by 37 percentage points from 54% in 2019 to 17% in July this year.

In **Wales**, room occupancy decreased by 40 percentage points, down from 73% in July 2019 to 33% this year. Bedspace occupancy fell by 34 percentage points when compared with the same month the previous year.

Occupancy levels in **Scotland** during July 2020 recorded the lowest occupancy levels across each of the nations with room occupancy witnessing a fall of 68 percentage points and bedspace occupancy levels falling from 64% in 2019 to 7% in July 2020.

With travel across the world affected by the Covid-19 pandemic, across the UK as a whole, bedspace occupancy by non-UK residents was 3%, a fall of 14 percentage points when compared against the same period the previous year. Northern Ireland witnessed a fall of 31 percentage points in occupancy levels, down from 40% in July 2019 to 9% in July 2020. Wales recorded a 6 percentage point decrease when compared to the previous year, down from 7% in 2019 to 1% in July this year. (Comparable figures for England and Scotland are no longer collected) – see notes 5b changes in data collected and 7 (methodological changes) Slide 8.

* See methodological note on slide 8

N.B. Due to the Covid-19 outbreak in the UK, the serviced accommodation industry saw an unprecedented number of establishments temporarily close their doors from late March 2020. On a sector-wise level these proportions will be an inflation of the occupancy levels in relation to previous years as many more serviced accommodation providers will have been closed owing to the extraordinary circumstances.
Methodology

1. The figures in this summary are based on data available within eight weeks of the end of the month. In some cases the boards will re-run the monthly analysis later in the year to include data which was received too late for inclusion in this summary. These later figures will be used in the 2020 Annual Summary.

2. The minimum target sample size for Northern Ireland, Scotland and Wales is 200 open establishments per month while in England the target minimum sample size is 750. Larger sample sizes may be used in some areas in order to enable Boards to undertake further analysis based on geographical sub-divisions of the data.

3. In the calculation of occupancy rates for the UK, occupancy rates from each country have been weighted using the number of bedspaces known to be available in the area.

4. **Occupancy rates:**
   - Bedspace occupancy: Percentage of available bedspaces which were occupied
   - Room occupancy: Percentage of available rooms which were occupied
   - Non-UK bedspace occupancy: Percentage of available bedspaces which were occupied by non-UK guests
   - Percentage of non-UK guests: Percentage of arrivals which were non-UK guests
   - Percentage of non-UK bednights: Percentage of occupied bedspaces which were occupied by non-UK guests

5. It should be noted that:
   a) because of changes in the data collected, it is no longer possible to provide UK/non UK figures for Scotland and England or figures relating to arrivals for Wales.
   b) from June 2010, English occupancy data includes additional occupancy information for the 100+ room hotel sector supplied by STR Global. Given the change in the structure of the sample, care should be taken in the interpretation of year-on-year changes.
6. **Accuracy of the results:** The statistical accuracy of the results depends upon the size of the sample, the variation in occupancy rates between establishments and (to a smaller extent) the size of the survey population. As the sample is self-selecting, it is not possible to calculate true statistical margins of error. However, it is likely that the results are accurate to between ± 5.9% (sample of 50) to ±1.6% (sample of 650). As there continues to be a substantial core of survey participants providing data every month, the trends which are identified by the survey are believed to reflect accurately overall trends in the use of serviced accommodation.

7. **Methodological note:** From June 2017, the England Occupancy estimates are collected using a different methodology. Using this data makes the survey more robust but has caused a break in trends for England and the UK. From June 2017, the new methodology is based on the STR occupancy estimates which are continuously collected whereas prior to June 2017 the England Occupancy estimates were collected through a bespoke panel. This methodological change has affected trends. Meaningful comparison between estimates collected from June 2017 onwards and estimates collected prior to June 2017 cannot be conducted for England and the UK. Data for Scotland, Wales and Northern Ireland remains unaffected by the change.
Background

As part of the EU Directive on Tourism Statistics adopted in January 1995, the UK is required to submit monthly occupancy rates for hotels and similar establishments (i.e. serviced accommodation) to Eurostat, the statistical office of the European Community. The responsibility for providing this data lies with the National Tourist Boards for England, Scotland and Northern Ireland and with Visit Wales (part of the Welsh Assembly Government), each of whom is responsible for the implementation of an occupancy survey in their area, carried out according to a common specification and standard, thus ensuring the production of comparable occupancy data for the whole of the UK.

The types of accommodation included in the survey are defined as **tourist accommodation which is arranged in rooms and where bed-making and cleaning services are provided.** This includes:

*Hotels, motels, inns, guest houses, farm guest houses, bed and breakfast establishments*

The types specifically excluded are:

Youth hostels and University accommodation

This summary has been compiled by The Research Solution (UK Survey Co-ordinator for 2019) from figures supplied by (or on behalf of) the National Tourist Boards of England, Northern Ireland (working with NISRA (the Northern Ireland Statistics and Research Agency)), Scotland and Visit Wales (part of the Welsh Government).
Further information about the surveys in individual areas may be obtained from the relevant organisations:
