Introduction

- VisitEngland, VisitScotland and Visit Wales have commissioned a Domestic Sentiment Tracker to understand the impact of major events, such as the cost of living crisis, on the UK public’s intent to take overnight trips, both within the UK and abroad.
- The survey addresses areas, such as: current attitude to travel (incl. concerns around travel and reassurances needed from the tourism sector), intentions of UK residents to travel for day trips, short breaks and holidays, when they plan to book and when they plan to go on their trip, as well as the destination, type of location and accommodation for their intended trip.
- This tracker is based on a UK nationally representative sample of 1,500 adults aged 16+, with additional boosts for Scotland and Wales.
- Fieldwork tends to take place at the start of each month and this wave’s fieldwork was conducted between 1\textsuperscript{st} to 7\textsuperscript{th} March 2024.
- The results (both, reports and data tables) are made publicly available and updated each wave at the following website:

Methodology & Further Data
Methodology

- This report presents findings from the March 2024 wave of the Domestic Sentiment Tracker, with comparisons to previous months where appropriate.

- The survey is conducted online, among a sample of the UK adult population.

- In the first stage, a nationally representative core sample of 1,500 is recruited and interviewed. This sample is then ‘boosted’ for Wales and Scotland to ensure sufficient base sizes for separate nation analysis. The data are then weighted to make the sample representative of the UK overall and within each nation.

PLEASE NOTE:

- The current 6th phase of this project started in April 2023 and will run until March 2024.

- With this newly commissioned phase, the questionnaire was updated to address the cost of living crisis’ impact on trips intentions. It also covers the preference for domestic vs overseas overnight trips.

- Please note that because of the questionnaire updates, some questions are not comparable between this 6th phase and the previous phases / waves.
